1.0 Thank you. A: Fixed with this solution `ffmpeg -i audiofile.wav -vcodec libvorbis -acodec libfaac -b:a 256k audio_chunk.ogg` Thanks to comment from @Pwnsauce Dangerous Diseases—The Host? Please note: This article is quite long, because it goes into a lot of detail and is intended to be informative. I usually make a recommendation that people with any problem in the neck, shoulder, and back region—especially the patients with neck or shoulder pain—should immediately consult a healthcare professional. However, an unexpected complication of the neck surgery described by Neer—a complication that has not been reported for other procedures—has led to such an uproar that I think it important to write about this situation. The wound in question was the result of removing a lymph node from the neck of a patient who had been diagnosed with a lymphoma. When the patient returned to the clinic after two weeks, he was complaining of an intense burning pain in the region of the scar. It took quite a while to identify the cause of this problem. The patient was experiencing symptoms of a quite common condition, called arthralgia. The burning pain was made worse by joint flexion, and was typically constant, but relieved by taking nonsteroidal anti-inflammatory drugs. However, in this case, the pain was constant, and not relieved by the NSAIDs. The patient was a 34-year-old man who worked as a computer operator. He had suffered from neck pain for at least five years, which was characterized by a burning pain on the right side of the neck. After a visit to a specialist, he had been told that the problem was due to spondylosis. This was, in fact, an accurate diagnosis, but the patient was advised not to do any physical work. As he was unable to work, he continued to have the pain. He consulted a physician, who thought he could treat the condition with steroids. However, the steroid treatment was unsuccessful, and the pain became worse. The patient was referred to a surgeon, who eventually decided to operate. It was the opinion of the surgeon that the surgery was not in the best interest of the patient and, in any case, the patient was advised not to continue with his employment. The patient made an appointment with an orthoped 82157476af
